

CETCO PROCESS EQUIPMENT

Walnut Shell Filter (WSF) Separators

Tertiary Treatment

Designed utilizing the standards and operating requirements developed over years of field proven experience, the Walnut Shell Filters (WSF's) supplied by CETCO Process Equipment are industry proven, rugged oil, water and solid separation systems.

Choices include an array of traditional skid-mounted standard designs and non-standard systems, which are fully customizable to specific needs of our customers. CETCO Process Equipment incorporates various auxiliary technologies with our WSF's to provide the end-user more value including: pump out packages, vapor (VOC) control, instrumentation and automation, solids managements, chemical treatment and much more.

Applications

- Oil water polishing in production operations
- Oil, water and solid separation in petroleum refineries, industrial waters and power plants
- Treats ship or terminal bilge and ballast water
- Oil water separation in chemical plants
- Oil removal from environmental remediation

Features & Benefits

- Fully customizable and modular design
- Standard models to 103,000 BWPD/3,000 GPM
- Proven design with high performance and reliability
- Complete skid-mounted packages available
